

## SBS Online MSBA Video Transcript

00:01

(relaxing music)

00:07

(whooshing sounds)

00:15

- So I actually learned Microsoft Power BI

00:18

as a visualization and reporting tool prior

00:21

to the MSBA on my own.

00:23

And one of the things that's been really interesting is how

00:26

I've been able to supplement that learning

00:29

with some of these newer techniques.

00:30

So I knew Power BI,

00:32

I knew how to visualize data,

00:34

but I didn't necessarily know how

00:34

to run machine learning algorithms or AI based analytics.

00:38

I've now taken a Python course,

00:40

and I can actually run some of the Python scripts that I've

00:43

learned in Power BI.

00:45

So now I can take my Power BI experience a step

00:48

further, not just visualize data,

00:49

but actually build out some real machine learning models

00:52

in Python and visualize them in Power BI.

00:56

I think that's probably one of the clearest examples of

00:57

something that's been really cool for me

00:59

to just experience.

01:00

If I think back to some of the courses where we've learned

01:03

SQL, for example, it was a fairly robust learning database.

01:07

We were running enterprise level applications.

01:11

And so the professors had been able to show us,

01:13

this is how you would actually do it in the real world.

01:15

These are the applications you would use.

01:17

These are the environments you would use.

01:19

This is the way you would actually

01:20

write your script or your code.

01:22

And so they've been able to walk us

01:23

through that in a fairly realistic way.

01:26

(relaxing music)
