

Full-text Database Options

Subscription databases provide various methods for obtaining the full-text of an article. It is wise to read the **abstract** or summary of the article before printing or e-mailing the full-text. Reviewing the abstract will help you to determine if the article is relevant to your topic. If it is not, then you have saved time by not reading it, and/or saved paper by not printing out an article. To read an abstract of an article, click on link for the article's title.

If you choose to read, print, save, or e-mail the full-text articles, you will generally have the following options:

- **HTML**- will provide the full text content of the article and sometimes provide graphics and images.
- **PDF** format- provides the full text content in Adobe's "PDF" format which is an image of the article as originally printed.
- **Linked full text**- will transfer the user to the full text of an article in another database affiliated with the information provider or publisher.
- Click **HERE** to see Library holdings- The full text content of an article may not be available in the database. However, the Sawyer Library may have the article in print, in microform, or an electronic subscription to the journal. The Sawyer Library catalog will show you what format is available in the Library.
- "**Check Full-Text Search Engine**"- opens the Sawyer Library's E-Journal Portal. The portal will inform the reader if the article is available in full text from one of the Sawyer Library's online databases.
- "**Check Library Catalog**"- will result in searching the library's online catalog for a print journal title.
