

## Reconfiguring LDAP for Netscape 7

This document details the reconfiguration of Netscape for Suffolk's new LDAP server, `sumail.suffolk.edu`.

### Specifying a Directory Server

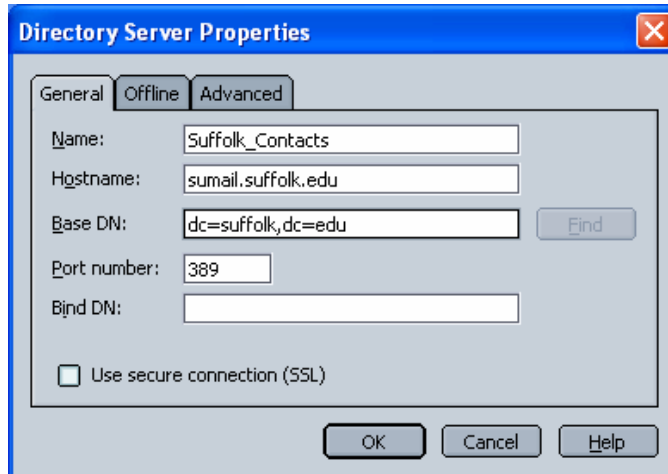

- **Click** on the **Window** menu and select **Address Book**. This will open Netscape's Address Book program.
- In the Address Book window, **Click** on the **y** menu, and choose **Preferences**.
- **Click Edit Directories**.

- Select the current LDAP Directory list named **Suffolk\_list** or **idigress.suffolk.edu** and **Click** on **Edit**. This will open the Directory Server Properties window.

- In the **Name field**, change the current name to **Suffolk\_Contacts**
- In the **Hostname field**, change the current **idigress.suffolk.edu** to **sumail.suffolk.edu**
- In the **Base DN field**, change the current **o=suffolk university,c=Us** to **dc=suffolk,dc=edu**
- Verify with image below.

- Click on **OK** to close the Directory Server Properties window.
- Click on **OK** in the LDAP Directory Servers window, and **click** on **OK** to close the Mail & Newsgroups Account Settings window.
