

How to forget a wireless network

When you reset your password, you must forget the network and configure again with new password.

Also, forget guest network if it continues to pop up.

To forget a network on:

MAC

1. Pull down the Wi-Fi menu icon and choose "Open Network Preferences", or go to the "Network" preference pane from Apple menu and System Preferences
2. Select "Wi-Fi" from the network panel sidebar, then click the "Advanced" button in the corner
3. Go to the "Wi-Fi" tab and find the router/network to forget under the "Preferred Networks" list
4. Select the network and then choose the [-] minus button to remove (forget) the wireless network
5. Confirm to forget the wi-fi network by choosing "Remove"
6. Repeat as necessary for other wifi networks to forget
7. Click "OK", then exit out of System Preferences, choose "Apply" if asked

Once a wireless network has been forgotten, OS X will no longer join it automatically – even if it is the only network available.

Windows:

1. Click or tap the *Wi-Fi* button from the system tray
2. In the list of available Wi-Fi networks, locate the network that you want to forget.
3. Right-click (or tap and hold) on the name of the network that you want to remove. In the menu that is shown, choose the *Forget* option.
4. That Wi-Fi network is immediately removed from the list of known networks.

Android:

1. Go to the Wifi section of your settings menu.
2. Find the network you want to get rid of.
3. Long press it, then chose "Forget." (There's also a "modify" option, which mostly is a nice way to change the Wifi password saved on your device.)

iOS – iphone or ipad

While in range of the wi-fi network

1. Launch the **Settings app**.
2. Tap **Wi-Fi**.
3. Tap the **info button** next to the wi-fi network you want to forget. It looks like a lower-case i.
4. Tap **Forget This Network**.
5. Tap **Forget** when prompted to confirm you want to forget the network.

How to stop automatically joining a network

1. Launch the **Settings app**.
2. Tap **Wi-Fi**.

3. Tap the **info button** next to the wi-fi network you want to forget. It looks like a lower-case *i*.
4. Turn the **Auto-Join** switch off.

Once you forget the SU_Student_WPA2 network, you will be able to re-enter your username and password when they try to connect to it.
