It's commonly referred to as Fintech, but the full name is Financial Technology. And it's recently become a really disruptive force in finance.

So in that concentration, if you choose to work on it, you are basically combining finance with advanced, modern technology and specifically you are going to be learning some programming so students will be learning how to apply machine learning software, looking into MATLAB or it could be Python and then doing various application.

And, you know, as a result, the skillset is all the finest knowledge that you take from your other finance courses. But then you're looking into it from a programming perspective as well, and then respect of your skillset is quite technical and you're prepared for a wide range of advanced analytical positions.
